

Homemade Mod Podge Recipes

Recipe #1:

1 ½ cups flour (or more)

¼ cup granulated sugar

¼ tsp olive oil (or more)

1 cup water (or more)

glass jar with lid (for storage)

1. Start with ½ cup of the flour, ¼ cup sugar, ¼ tsp olive oil, and ½ cup of the water in a saucepan on the stove on low heat.
2. Add additional flour and water as needed until you reach desired consistency. (If you want a thicker result, add more flour and less water. For a thinner result, add more water and less flour.)
3. You may also add more oil if you'd like a shinier finish.
4. Stir all ingredients as you cook the mixture over low heat for 5 minutes. (Do not boil!)
5. Once your mixture is cooked and well combined, remove from stove and pour into glass jar. Allow to cool before putting lid on jar.

Recipe #2:

white glue (such as Elmer's School Glue)

water

NOTE: For this recipe, use half glue and half water. Measure the amount of glue you need so you'll know how much water to add. If you use 8 ounces of glue, add 8 ounces of water. If you use 2 ounces of glue, use 2 ounces of water, etc.

1. Pour glue into a small bowl.
2. Add the same amount of water as the amount of glue and add to the bowl.
3. Stir until well combined.
4. Store in a glass jar with a lid.

NOTE: If you'd like a thicker Mod Podge, simply use 1/3 cup of water for every cup of glue instead of using half glue and half water.

Recipe #3:

2 tsp sugar

2 tsp cornstarch

1 tsp gelatin

2 tbsp vinegar

1 cup water (divided)

1. Put $\frac{1}{4}$ cup water and 2 tsp sugar into a small pot. Bring to a boil.
2. In a cup or small bowl, mix 2 tsp cornstarch with $\frac{1}{2}$ cup water.
3. In another cup or small bowl, add gelatin to $\frac{1}{4}$ cup water.
4. Stir cornstarch mixture into boiling sugar water mixture. Stir until it becomes thick and clear. Remove from heat.
5. Add gelatin/water mixture to the hot cornstarch/sugar water mixture.
6. Mix all ingredients well.
7. Once cooled, add vinegar and stir well.
8. Store in a glass jar with a lid.

Recipe #4 (Water-Resistant Mod Podge):

If you want a more water-resistant Mod Podge recipe, simply use a waterproof wood glue such as [Franklin International 1414 Titebond-3 Ultimate Wood Glue](#) and mix with water. Use less water for a thicker result and more water for a thinner result.
